

VOC Leg Covers

TFSL has designed a Leg Covers to reduce hydrocarbon emissions from floating roof tanks. This solution eliminates emissions through the leg and leg sleeve.

Various regulatory agencies including the American EPA are now requiring that appurtenances such as Floating Roof Legs and Leg Sleeves be provided with an emissions control system. TFSL Floating Roof Leg Covers features a specially formulated Poly Urethane Reinforced Fabric with UV Protective Coating that is impervious to weather, stored products and ultraviolet rays.

TFSL Floating Roof Leg Covers can normally be installed without removing your tank from service.

The TFSL Floating Roof Leg Sock is another product demonstrating TFSL "Innovative Solutions" philosophy and commitment to providing quality products to the petroleum industry.

Features:

- Resistant to all stored products
- Maintenance free
- Easy to install
- "In-Service" installation
- Eliminates hydrocarbon emissions from floating roof legs and sleeves
