

Live Mastir Cannons

Following the success of the Mastir cannons, Tank Farm Services Ltd developed a new jet mixer that can be installed onto a live tank.

Tank Farm Services Live Mastir Cannons are designed to keep tanks free from sludge thereby maximising tank utilisation, minimising process upsets and reducing corrosion of the tank floor plates by maintaining a clean floor and an open water draw.

The LMC can be inserted into a live tank through a 100mm 200mm or 300mm valve. LMC's are capable of re-suspension and blending and can be used in conjunction with a heating system to carry out heated resuspension and non-entry tank cleaning

The Live Mastir Cannons are available as a contracted service for the desludging of crude oil storage tanks without man entry.

To effect your routine sludge control strategy, the Live Mastir Cannons are available for purchase complete with its own mobile power source; independent of and therefore not reliant upon existing in place pumping capabilities.

Tank Farm Services Ltd are specialists in crude sludge management, and offer a wide range of services and equipment including crude oil processing, mobile steam generation, pumping service, topographic surveys etc.

Advantages over existing resuspension equipment

- No manway removal
- Reduced environmental risks
- No transfer of product
- Reduced resuspension programme
- No tank downtime
- Increased safety
- Lower Cost
- Improved nozzle sweep
- Up to 180 degree sweep
